

LIFEJACKETS - BUOYANCY AIDS

PETFLOAT

Suitable for most breeds of dogs and cats the Petfloat is designed to provide safety and comfort for pets by providing additional buoyancy in the water.

The buoyancy is provided by soft closed cell PVC foam and a lifting handle attaches to strong webbings which go round the pet allowing the animal to be lifted from the water. A chest strap is located between the legs to

spread the load when the pet is lifted. Please note the Petfloat is not solely a lifting harness so care should be taken when securing and lifting the animal.

The Petfloat is ideal for all working dogs whether these are assistance dogs going on a cruise or working for the rescue authorities.

KEY BENEFITS:

Available in five sizes to cater for all dogs and cats – Extra Small to Extra Large

To find the perfect fit for the animal measure from the collar to the base of the tail and use the table below to confirm which size to order

Soft closed cell foam for comfort

Easy to adjust and quick to fit
